

on a plane of consistency of variation, the plane of music and of the *Recherche* (just as Wagnerian motifs abandon all fixity of form and all assignation of personages). It is as though Swann's desperate efforts to reterritorialize the flow of things (to reterritorialize Odette on a secret, painting on a face, music on the Bois de Boulogne) were replaced by the sped-up movement of deterritorialization, by a linear speedup of the abstract machine, sweeping away faces and landscapes, and then love, jealousy, painting, and music itself, according to increasingly stronger coefficients that nourish the Work at risk of dissolving everything and dying. For the narrator, despite partial victories, fails in his project; that project was not at all to regain time or to force back memories, but to become master of speeds to the rhythm of his asthma. It was to face annihilation. But another outcome was possible, or was made possible by Proust.

Memories of a Molecule. Becoming-animal is only one becoming among others. A kind of order or apparent progression can be established for the segments of becoming in which we find ourselves; becoming-woman, becoming-child; becoming-animal, -vegetable, or -mineral; becoming-molecular of all kinds, becoming-particles. Fibers lead us from one to the other, transform one into the other as they pass through doors and across thresholds. Singing or composing, painting, writing have no other aim: to unleash these becomings. Especially music; music is traversed by a becoming-woman, becoming-child, and not only at the level of themes and motifs: the little refrain, children's games and dances, childhood scenes. Instrumentation and orchestration are permeated by becomings-animal, above all becomings-bird, but many others besides. The lapping, wailing of molecular discordances have always been present, even if instrumental evolution with other factors is now giving them growing importance, as the value of a new threshold for a properly musical content: the sound molecule, relations of speed and slowness between particles. Becomings-animal plunge into becomings-molecular. This raises all kinds of questions.

In a way, we must start at the end: all becomings are already molecular. That is because becoming is not to imitate or identify with something or someone. Nor is it to proportion formal relations. Neither of these two figures of analogy is applicable to becoming: neither the imitation of a subject nor the proportionality of a form. Starting from the forms one has, the subject one is, the organs one has, or the functions one fulfills, becoming is to extract particles between which one establishes the relations of movement and rest, speed and slowness that are *closest* to what one is becoming, and through which one becomes. This is the sense in which becoming is the process of desire. This principle of proximity or approximation is entirely particular and reintroduces no analogy whatsoever. It indicates as rigor-

ously as possible a *zone of proximity*⁵⁵ or *copresence* of a particle, the movement into which any particle that enters the zone is drawn. Louis Wolfson embarks upon a strange undertaking: a schizophrenic, he translates as quickly as possible each phrase in his maternal language into foreign words with similar sound and meaning; an anorexic, he rushes to the refrigerator, tears open the packages and snatches their contents, stuffing himself as quickly as possible.⁵⁶ It would be false to believe that he needs to borrow "disguised" words from foreign languages. Rather, he snatches from his own language verbal particles that can no longer belong to the form of that language, just as he snatches from food alimentary particles that no longer act as formed nutritional substances; the two kinds of particles enter into proximity. We could also put it this way: Becoming is to emit particles that take on certain relations of movement and rest because they enter a particular zone of proximity. Or, it is to emit particles that enter that zone because they take on those relations. A haecceity is inseparable from the fog and mist that depend on a molecular zone, a corpuscular space. Proximity is a notion, at once topological and quantal, that marks a belonging to the same molecule, independently of the subjects considered and the forms determined.

Schérer and Hocquenghem made this essential point in their reconsideration of the problem of wolf-children. Of course, it is not a question of a real production, as if the child "really" became an animal; nor is it a question of a resemblance, as if the child imitated animals that really raised it; nor is it a question of a symbolic metaphor, as if the autistic child that was abandoned or lost merely became the "analogue" of an animal. Schérer and Hocquenghem are right to expose this false reasoning, which is based on a culturalism or moralism upholding the irreducibility of the human order: Because the child has not been transformed into an animal, it must only have a metaphorical relation to it, induced by the child's illness or rejection. For their own part, they appeal to an objective zone of indetermination or uncertainty, "something shared or indiscernible," a proximity "that makes it impossible to say where the boundary between the human and animal lies," not only in the case of autistic children, but for all children; it is as though, independent of the evolution carrying them toward adulthood, there were room in the child for other becomings, "other contemporaneous possibilities" that are not regressions but creative involutions bearing witness to "*an inhumanity immediately experienced in the body as such*," unnatural nuptials "outside the programmed body." There is a reality of becoming-animal, even though one does not in reality become an animal. It is useless, then, to raise the objection that the dog-child only plays dog within the limits of his formal constitution, and does nothing canine that another human being could not have done if he or she had so

desired. For what needs to be explained is precisely the fact that all children, and even many adults, do it to a greater or lesser degree, and in so doing bear witness to an inhuman connivance with the animal, rather than an Oedipal symbolic community.⁵⁷ Neither should it be thought that children who graze, or eat dirt or raw flesh, are merely getting the vitamins and minerals they need. It is a question of composing a body with the animal, a body without organs defined by zones of intensity or proximity. Where does this objective indetermination or indiscernibility of which Schéer and Hocquenghem speak come from?

An example: Do not imitate a dog, but make your organism enter into composition with *something else* in such a way that the particles emitted from the aggregate thus composed will be canine as a function of the relation of movement and rest, or of molecular proximity, into which they enter. Clearly, this something else can be quite varied, and be more or less directly related to the animal in question: it can be the animal's natural food (dirt and worm), or its exterior relations with other animals (you can become-dog with cats, or become-monkey with a horse), or an apparatus or prosthesis to which a person subjects the animal (muzzle and reindeer, etc.), or something that does not even have a localizable relation to the animal in question. For this last case, we have seen how Slepian bases his attempt to become-dog on the idea of tying shoes to his hands using his mouth-muzzle. Philippe Gavi cites the performances of Lolito, an eater of bottles, earthenware, porcelains, iron, and even bicycles, who declares: "I consider myself half-animal, half-man. More animal than man. I love animals, dogs especially, I feel a bond with them. My teeth have adapted; in fact, when I don't eat glass or iron, my jaw aches like a young dog's that craves to chew a bone."⁵⁸ If we interpret the word "like" as a metaphor, or propose a structural analogy of relations (man-iron = dog-bone), we understand nothing of becoming. The word "like" is one of those words that change drastically in meaning and function when they are used in connection with haecceities, when they are made into expressions of becoming instead of signified states or signifying relations. A dog may exercise its jaw on iron, but when it does it is using its jaw as a molar organ. When Lolito eats iron, it is totally different: he makes his jaw enter into composition with the iron in such a way that he himself becomes the jaw of a molecular dog. The actor Robert De Niro walks "like" a crab in a certain film sequence; but, he says, it is not a question of his imitating a crab; it is a question of making something that has to do with the crab enter into composition with the image, with the speed of the image.⁵⁹ That is the essential point for us: you become-animal only if, by whatever means or elements, you emit corpuscles that enter the relation of movement and rest of the animal particles, or what amounts to the same thing, that enter the zone of

proximity of the animal molecule. You become animal only molecularly. You do not become a barking molar dog, but by barking, if it is done with enough feeling, with enough necessity and composition, you emit a molecular dog. Man does not become wolf, or vampire, as if he changed molar species; the vampire and werewolf are becoming of man, in other words, proximities between molecules in composition, relations of movement and rest, speed and slowness between emitted particles. Of course there are werewolves and vampires, we say this with all our heart; but do not look for a resemblance or analogy to the animal, for this is becoming-animal in action, the production of the molecular animal (whereas the "real" animal is trapped in its molar form and subjectivity). It is within us that the animal bares its teeth like Hofmannsthal's rat, or the flower opens its petals; but this is done by corpuscular emission, by molecular proximity, and not by the imitation of a subject or a proportionality of form. Albertine can always imitate a flower, but it is when she is sleeping and enters into composition with the particles of sleep that her beauty spot and the texture of her skin enter a relation of rest and movement that place her in the zone of a molecular vegetable: the becoming-plant of Albertine. And it is when she is held prisoner that she emits the particles of a bird. And it is when she flees, launches down a line of flight, that she becomes-horse, even if it is the horse of death.

Yes, all becoming are molecular: the animal, flower, or stone one becomes are molecular collectivities, haecceities, not molar subjects, objects, or form that we know from the outside and recognize from experience, through science, or by habit. If this is true, then we must say the same of things human: there is a becoming-woman, a becoming-child, that do not resemble the woman or the child as clearly distinct molar entities (although it is possible—only possible—for the woman or child to occupy privileged positions in relation to these becoming). What we term a molar entity is, for example, the woman as defined by her form, endowed with organs and functions and assigned as a subject. Becoming-woman is not imitating this entity or even transforming oneself into it. We are not, however, overlooking the importance of imitation, or moments of imitation, among certain homosexual males, much less the prodigious attempt at a real transformation on the part of certain transvestites. All we are saying is that these indissociable aspects of becoming-woman must first be understood as a function of something else: not imitating or assuming the female form, but emitting particles that enter the relation of movement and rest, or the zone of proximity, of a microfemininity, in other words, that produce in us a molecular woman, create the molecular woman. We do not mean to say that a creation of this kind is the prerogative of the man, but on the contrary that the woman as a molar entity *has to become-woman* in order that

the man also becomes- or can become-woman. It is, of course, indispensable for women to conduct a molar politics, with a view to winning back their own organism, their own history, their own subjectivity: "we as women . . ." makes its appearance as a subject of enunciation. But it is dangerous to confine oneself to such a subject, which does not function without drying up a spring or stopping a flow. The song of life is often intoned by the driest of women, moved by *ressentiment*, the will to power and cold mothering. Just as a desiccated child makes a much better child, there being no childhood flow emanating from it any longer. It is no more adequate to say that each sex contains the other and must develop the opposite pole in itself. Bisexuality is no better a concept than the separateness of the sexes. It is as deplorable to miniaturize, internalize the binary machine as it is to exacerbate it; it does not extricate us from it. It is thus necessary to conceive of a molecular women's politics that slips into molar confrontations, and passes under or through them.

When Virginia Woolf was questioned about a specifically women's writing, she was appalled at the idea of writing "as a woman." Rather, writing should produce a becoming-woman as atoms of womanhood capable of crossing and impregnating an entire social field, and of contaminating men, of sweeping them up in that becoming. Very soft particles—but also very hard and obstinate, irreducible, indomitable. The rise of women in English novel writing has spared no man: even those who pass for the most virile, the most phallographic, such as Lawrence and Miller, in their turn continually tap into and emit particles that enter the proximity or zone of indiscernibility of women. In writing, they become-women. The question is not, or not only, that of the organism, history, and subject of enunciation that oppose masculine to feminine in the great dualism machines. The question is fundamentally that of the body—the body they *steal* from us in order to fabricate opposable organisms. This body is stolen first from the girl: Stop behaving like that, you're not a little girl anymore, you're not a tomboy, etc. The girl's becoming is stolen first, in order to impose a history, or prehistory, upon her. The boy's turn comes next, but it is by using the girl as an example, by pointing to the girl as the object of his desire, that an opposed organism, a dominant history is fabricated for him too. The girl is the first victim, but she must also serve as an example and a trap. That is why, conversely, the reconstruction of the body as a Body without Organs, the anorganism of the body, is inseparable from a becoming-woman, or the production of a molecular woman. Doubtless, the girl becomes a woman in the molar or organic sense. But conversely, becoming-woman or the molecular woman is the girl herself. The girl is certainly not defined by virginity; she is defined by a relation of movement and rest, speed and slowness, by a combination of atoms, an emission of particles: haecceity. She never ceases

to roam upon a body without organs. She is an abstract line, or a line of flight. Thus girls do not belong to an age group, sex, order, or kingdom: they slip in everywhere, between orders, acts, ages, sexes; they produce *n* molecular sexes on the line of flight in relation to the dualism machines they cross right through. The only way to get outside the dualisms is to be-between, to pass between, the *intermezzo*—that is what Virginia Woolf lived with all her energies, in all of her work, never ceasing to become. The girl is like the block of becoming that remains contemporaneous to each opposable term, man, woman, child, adult. It is not the girl who becomes a woman; it is becoming-woman that produces the universal girl. Trost, a mysterious author, painted a portrait of the girl, to whom he linked the fate of the revolution: her speed, her freely machinic body, her intensities, her abstract line or line of flight, her molecular production, her indifference to memory, her nonfigurative character—"the nonfigurative of desire."⁶⁰ Joan of Arc? The special role of the girl in Russian terrorism: the girl with the bomb, guardian of dynamite? It is certain that molecular politics proceeds via the girl and the child. But it is also certain that girls and children draw their strength neither from the molar status that subdues them nor from the organism and subjectivity they receive; they draw their strength from the becoming-molecular they cause to pass between sexes and ages, the becoming-child of the adult as well as of the child, the becoming-woman of the man as well as of the woman. The girl and the child do not become; it is becoming itself that is a child or a girl. The child does not become an adult any more than the girl becomes a woman; the girl is the becoming-woman of each sex, just as the child is the becoming-young of every age. Knowing how to age does not mean remaining young; it means extracting from one's age the particles, the speeds and slownesses, the flows that constitute the youth of *that* age. Knowing how to love does not mean remaining a man or a woman; it means extracting from one's sex the particles, the speeds and slownesses, the flows, the *n* sexes that constitute the girl of *that* sexuality. It is Age itself that is a becoming-child, just as Sexuality, any sexuality, is a becoming-woman, in other words, a girl. This by way of response to the stupid question, Why did Proust make Albert Albertine?

Although all becomings are already molecular, including becoming-woman, it must be said that all becomings begin with and pass through becoming-woman. It is the key to all the other becomings. When the man of war disguises himself as a woman, flees disguised as a girl, hides as a girl, it is not a shameful, transitory incident in his life. To hide, to camouflage oneself, is a warrior function, and the line of flight attracts the enemy, traverses something and puts what it traverses to flight; the warrior arises in the infinity of a line of flight. Although the femininity of the man of war is not accidental, it should not be thought of as structural, or regulated by a

correspondence of relations. It is difficult to see how the correspondence between the two relations "man-war" and "woman-marriage" could entail an equivalence between the warrior and the girl as a woman who refuses to marry.⁶¹ It is just as difficult to see how the general bisexuality, or even homosexuality, of military societies could explain this phenomenon, which is no more imitative than it is structural, representing instead an essential *anomie* of the man of war. This phenomenon can only be understood in terms of becoming. We have seen how the man of war, by virtue of his *furor* and celerity, was swept up in irresistible becoming-animal. These are becoming that have as their necessary condition the becoming-woman of the warrior, or his alliance with the girl, his contagion with her. The man of war is inseparable from the Amazons. The union of the girl and the man of war does not produce animals, but simultaneously produces the becoming-woman of the latter and the becoming-animal of the former, in a single "block" in which the warrior in turn becomes animal by contagion with the girl at the same time as the girl becomes warrior by contagion with the animal. Everything ties together in an asymmetrical block of becoming, an instantaneous zigzag. It is in the vestiges of a double war machine—that of the Greeks, soon to be supplanted by the State, and that of the Amazons, soon to be dissolved—that Achilles and Penthesilea, the last man of war and the last queen of the girls, choose one another, Achilles in a becoming-woman, Penthesilea in a becoming-dog.

The rites of transvestism or female impersonation in primitive societies in which a man becomes a woman are not explainable by a social organization that places the given relations in correspondence, or by a psychic organization that makes the woman desire to become a man just as the man desires to become a woman.⁶² Social structure and psychic identification leave too many special factors unaccounted for: the linkage, unleashing, and communication of the becoming triggered by the transvestite; the power (*puissance*) of the resultant becoming-animal; and above all the participation of these becoming in a specific war machine. The same applies for sexuality: it is badly explained by the binary organization of the sexes, and just as badly by a bisexual organization within each sex. Sexuality brings into play too great a diversity of conjugated becoming; these are like *n* sexes, an entire war machine through which love passes. This is not a return to those appalling metaphors of love and war, seduction and conquest, the battle of the sexes and the domestic squabble, or even the Strindberg-war: it is only after love is done with and sexuality has dried up that things appear this way. What counts is that love itself is a war machine endowed with strange and somewhat terrifying powers. Sexuality is the production of a thousand sexes, which are so many uncontrollable beings. *Sexuality proceeds by way of the becoming-woman of the man and the*

becoming-animal of the human: an emission of particles. There is no need for bestialism in this, although it may arise, and many psychiatric anecdotes document it in ways that are interesting, if oversimplified and consequently off the track, too beastly. It is not a question of "playing" the dog, like an elderly gentleman on a postcard; it is not so much a question of making love with animals. Becoming-animal are basically of another power, since their reality resides not in an animal one imitates or to which one corresponds but in themselves, in that which suddenly sweeps us up and makes us become—a *proximity*, an *indiscernibility* that extracts a shared element from the animal far more effectively than any domestication, utilization, or imitation could: "the Beast."

If becoming-woman is the first quantum, or molecular segment, with the becoming-animal that link up with it coming next, what are they all rushing toward? Without a doubt, toward becoming-imperceptible. The imperceptible is the immanent end of becoming, its cosmic formula. For example, Matheson's *Shrinking Man* passes through the kingdoms of nature, slips between molecules, to become an unfindable particle in infinite meditation on the infinite. Paul Morand's *Monstieur Zéro* flees the larger countries, crosses the smallest ones, descends the scale of States, establishes an anonymous society in Lichtenstein of which he is the only member, and dies imperceptible, forming the particle 0 with his fingers: "I am a man who flees by swimming under water, and at whom all the world's rifles fire. . . . I must no longer offer a target." But what does becoming-imperceptible signify, coming at the end of all the molecular becoming that begin with becoming-woman? Becoming-imperceptible means many things. What is the relation between the (anorganic) imperceptible, the (asignifying) indiscernible, and the (asubjective) impersonal?

A first response would be: to be like everybody else. That is what Kierkegaard relates in his story about the "knight of the faith," the man of becoming: to look at him, one would notice nothing, a bourgeois, nothing but a bourgeois. That is how Fitzgerald lived: after a real rupture, one succeeds . . . in being just like everybody else. To go unnoticed is by no means easy. To be a stranger, even to one's doorman or neighbors. If it is so difficult to be "like" everybody else, it is because it is an affair of becoming. Not everybody becomes everybody [and everything: *tout le monde*—Trans.], makes a becoming of everybody/everything. This requires much asceticism, much sobriety, much creative involution: an English elegance, an English fabric, blend in with the walls, eliminate the too-perceived, the too-much-to-be-perceived. "Eliminate all that is waste, death, and superfluity," complaint and grievance, unsatisfied desire, defense or pleading, everything that roots each of us (everybody) in ourselves, in our molarity. For everybody/everything is the molar aggregate, but *becoming everybody*!

everything is another affair, one that brings into play the cosmos with its molecular components. Becoming everybody/everything (*tout le monde*) is to world (*faire monde*), to make a world (*faire un monde*). By process of elimination, one is no longer anything more than an abstract line, or a piece in a puzzle that is itself abstract. It is by conjugating, by continuing with other lines, other pieces, that one makes a world that can overlay the first one, like a transparency. Animal elegance, the camouflage fish, the clan-destine: this fish is crisscrossed by abstract lines that resemble nothing, that do not even follow its organic divisions; but thus disorganized, disarticulated, it worlds with the lines of a rock, sand, and plants, becoming imperceptible. The fish is like the Chinese poet: not imitative or structural, but cosmic. François Cheng shows that poets do not pursue resemblance, any more than they calculate "geometric proportions." They retain, extract only the essential lines and movements of nature; they proceed only by continued or superposed "traits," or strokes.⁶³ It is in this sense that becoming-everybody/everything, making the world a becoming, is to world, to make a world or worlds, in other words, to find one's proximities and zones of indiscernibility. The Cosmos as an abstract machine, and each world as an assemblage effectuating it. If one reduces oneself to one or several abstract lines that will prolong itself in and conjugate with others, producing immediately, directly a world in which it is *the* world that becomes, then one becomes-everybody/everything. Kerouac's dream, and already Virginia Woolf's, was for the writing to be like the line of a Chinese poem-drawing. She says that it is necessary to "saturate every atom," and to do that it is necessary to eliminate, to eliminate all that is resemblance and analogy, but also "to put everything into it": eliminate everything that exceeds the moment, but put in everything that it includes—and the moment is not the instantaneous, it is the haecceity into which one slips and that slips into other haecceities by transparency.⁶⁴ To be present at the dawn of the world. Such is the link between imperceptibility, indiscernibility, and impersonality—the three virtues. To reduce oneself to an abstract line, a trait, in order to find one's zone of indiscernibility with other traits, and in this way enter the haecceity and impersonality of the creator. One is then like grass: one has made the world, everybody/everything, into a becoming, because one has made a necessarily communicating world, because one has suppressed in oneself everything that prevents us from slipping between things and growing in the midst of things. One has combined "everything" (*le "tout"*): the indefinite article, the infinitive-becoming, and the proper name to which one is reduced. Saturate, eliminate, put everything in.

Movement has an essential relation to the imperceptible; it is by nature imperceptible. Perception can grasp movement only as the displacement

of a moving body or the development of a form. Movements, becomings, in other words, pure relations of speed and slowness, pure affects, are below and above the threshold of perception. Doubtless, thresholds of perception are relative; there is always a threshold capable of grasping what eludes another: the eagle's eye . . . But the adequate threshold can in turn operate only as a function of a perceptible form and a perceived, discerned subject. So that movement in itself *continues* to occur elsewhere: if we serialize perception, the movement always takes place above the maximum threshold and below the minimum threshold, in expanding or contracting intervals (microintervals). Like huge Japanese wrestlers whose advance is too slow and whose holds are too fast to see, so that what embraces are less the wrestlers than the infinite slowness of the wait (what is going to happen?) and the infinite speed of the result (what happened?). What we must do is reach the photographic or cinematic threshold; but in relation to the photograph, movement and affect once again took refuge above and below. When Kierkegaard adopts the marvelous motto, "I look only at the movements,"⁶⁵ he is acting astonishingly like a precursor of the cinema, multiplying versions of a love scenario (between Agnes and the merman) according to variable speeds and slownesses. He has all the more reason to say that there is no movement that is not infinite; that the movement of the infinite can occur only by means of affect, passion, love, in a becoming that is the girl, but without reference to any kind of "mediation"; and that this movement as such eludes any mediating perception because it is already effectuated at every moment, and the dancer or lover finds him- or herself already "awake and walking" the second he or she falls down, and even the instant he or she leaps.⁶⁶ Movement, like the girl as a fugitive being, cannot be perceived.

However, we are obliged to make an immediate correction: movement also "must" be perceived, it cannot but be perceived, the imperceptible is also the *perceptendum*. There is no contradiction in this. If movement is imperceptible by nature, it is so always in relation to a given threshold of perception, which is by nature relative and thus plays the role of a mediation on the plane that effects the distribution of thresholds and percepts and makes forms perceivable to perceiving subjects. It is the plane of organization and development, the plane of transcendence, that renders perceptible without itself being perceived, without being capable of being perceived. But on the *other* plane, the plane of immanence or consistency, the principle of composition itself must be perceived, cannot but be perceived at the same time as that which it composes or renders. In this case, movement is no longer tied to the mediation of a relative threshold that it eludes ad infinitum; it has reached, regardless of its speed or slowness, an absolute but differentiated threshold that is one with the construction of

this or that region of the continued plane. It could also be said that movement ceases to be the procedure of an always relative deterritorialization, becoming the process of absolute deterritorialization. The difference between the two planes accounts for the fact that what cannot be perceived on one cannot but be perceived on the other. It is in jumping from one plane to the other, or from the relative thresholds to the absolute threshold that coexists with them, that the imperceptible becomes necessarily perceived. Kierkegaard shows that the plane of the infinite, which he calls the plane of faith, must become a pure plane of immanence that continually and immediately imparts, reimparts, and regathers the finite: unlike the man of infinite resignation, the knight of the faith or man of becoming will get the girl, he will have all of the finite and perceive the imperceptible, as "their apparent to the finite."⁶⁷ Perception will no longer reside in the relation between a subject and an object, but rather in the movement serving as the limit of that relation, in the period associated with the subject and object. Perception will confront its own limit; it will be in the midst of things, throughout its own proximity, as the presence of one haeceity in another, the prehension of one by the other or the passage from one to the other: Look only at the movements.

It is odd that the word "faith" should be used to designate a plane that works by immanence. But if the knight is the man of becoming, then there are all kinds of knights. Are there not even knights of narcotics, in the sense that faith is a drug (in a way very different from the sense in which religion is an opiate)? These knights claim that drugs, under necessary conditions of caution and experimentation, are inseparable from the deployment of a plane. And on this plane not only are becomings-woman, becomings-animal, becomings-molecular, becomings-imperceptible conjugated, but the imperceptible itself becomes necessarily perceived at the same time as perception becomes necessarily molecular: arrive at holes, microintervals between matters, colors and sounds engulfing lines of flight, world lines, lines of transparency and intersection.⁶⁸ *Change perception*: the problem has been formulated correctly because it presents "drugs" as a pregnant whole free of secondary distinctions (hallucinatory or nonhallucinatory, hard or soft, etc.). All drugs fundamentally concern speeds, and modifications of speed. What allows us to describe an overall Drug assemblage in spite of the differences between drugs is a line of perceptive causality that makes it so that (1) the imperceptible is perceived; (2) perception is molecular; (3) desire directly invests the perception and the perceived. The Americans of the beat generation had already embarked on this path, and spoke of a molecular revolution specific to drugs. Then came Castaneda's broad synthesis. Leslie Fiedler set forth the poles of the American Dream: cornered between two nightmares, the genocide of the Indians and the slav-

ery of the blacks, Americans constructed a psychically repressed image of the black as the force of affect, of the multiplication of affects, but a socially repressed image of the Indian as subtlety of perception, perception made increasingly keen and more finely divided, infinitely slowed or accelerated.⁶⁹ In Europe, Henri Michaux tended to be more willing to free himself of rites and civilizations, establishing admirable and minute protocols of experience, doing away with the question of causality with respect to drugs, delimiting drugs as well as possible, separating them from delirium and hallucination. But at this point everything reconnects: again, the problem is well formulated if we say that drugs eliminate forms and persons, if we bring into play the mad speeds of drugs and the extraordinary posthigh slownesses, if we clasp one to the other like wrestlers, if we confer upon perception the molecular power to grasp microperceptions, microoperations, and upon the perceived the force to emit accelerated or decelerated particles in a floating time that is no longer our time, and to emit haeceities that are no longer of this world: deterritorialization, "I was disoriented . . ." (a perception of things, thoughts, desires in which desire, thought, and the thing have invaded all of perception: the imperceptible finally perceived). Nothing left but the world of speeds and slownesses without form, without subject, without a face. Nothing left but the zigzag of a line, like "the lash of the whip of an enraged cart driver" shredding faces and landscapes.⁷⁰ A whole rhizomatic labor of perception, the moment when desire and perception meld.

This problem of specific causality is an important one. Invoking causalities that are too general or are extrinsic (psychological or sociological) is as good as saying nothing. There is a discourse on drugs current today that does no more than dredge up generalities on pleasure and misfortune, on difficulties in communication, on causes that always come from somewhere else. The more incapable people are of grasping a specific causality in extension, the more they pretend to understand the phenomenon in question. There is no doubt that an assemblage never contains a causal infrastructure. It does have, however, and to the highest degree, an abstract line of creative or specific causality, its *line of flight* or *deterritorialization*; this line can be effectuated only in connection with general causalities of another nature, but is in no way explained by them. It is our belief that the issue of drugs can be understood only at the level where desire directly invests perception, and perception becomes molecular at the same time as the imperceptible is perceived. Drugs then appear as the agent of this becoming. This is where pharmacanalysis would come in, which must be both compared and contrasted to psychoanalysis. For psychoanalysis must be taken simultaneously as a model, a contrasting approach, and a betrayal. Psychoanalysis can be taken as a model of reference because it was able,

with respect to essentially affective phenomena, to construct the schema of a specific causality divorced from ordinary social or psychological generalities. But this schema still relies on a plane of organization that can never be apprehended in itself, that is always concluded from something else, that is always inferred, concealed from the system of perception: it is called the Unconscious. Thus the plane of the Unconscious remains a plane of transcendence guaranteeing, justifying, the existence of psychoanalysis and the necessity of its interpretations. This plane of the Unconscious stands in molar opposition to the perception-consciousness system, and because desire must be *translated* onto this plane, it is itself linked to gross molarities, like the submerged part of an iceberg (the Oedipal structure, or the rock of castration). The imperceptible thus remains all the more imperceptible because it is opposed to the perceived in a dualism machine. Everything is different on the plane of consistency or immanence, which is necessarily perceived in its own right in the course of its construction: experimentation replaces interpretation, now molecular, nonfigurative, and nonsymbolic, the unconscious as such is given in microperceptions; desire directly invests the field of perception, where the imperceptible appears as the perceived object of desire itself, "the nonfigurative of desire." The unconscious no longer designates the hidden principle of the transcendent plane of organization, but the process of the immanent plane of consistency as it appears on itself in the course of its construction. For the unconscious must be constructed, not rediscovered. There is no longer a conscious-unconscious dualism machine, because the unconscious is, or rather is produced, there where consciousness goes, carried by the plane.⁷¹ Drugs give the unconscious the immanence and plane that psychoanalysis has consistently botched (perhaps the famous cocaine episode marked a turning point that forced Freud to renounce a direct approach to the unconscious).

But if it is true that drugs are linked to this immanent, molecular perceptive causality, we are still faced with the question of whether they actually succeed in drawing the plane necessary for their action. The causal line, or the line of flight, of drugs is constantly being segmentarized under the most rigid of forms, that of dependency, the hit and the dose, the dealer. Even in its supple form, it can mobilize gradients and thresholds of perception toward becoming-animal, becoming-molecular, but even this is done in the context of a relativity of thresholds that restrict themselves to imitating a plane of consistency rather than drawing it on an absolute threshold. What good does it do to perceive as fast as a quick-flying bird if speed and movement continue to escape somewhere else? The deterritorializations remain relative, compensated for by the most abject reterritorializations, so that the imperceptible and perception continually pursue or run after

each other without ever truly coupling. Instead of holes in the world allowing the world lines themselves to run off, the lines of flight coil and start to swirl in black holes; to each addict a hole, group or individual, like a snail. Down, instead of high. The molecular microperceptions are overlaid in advance, depending on the drug, by hallucinations, delusions, false perceptions, phantasies, or paranoid outbursts; they restore forms and subjects every instant, like so many phantoms or doubles continually blocking construction of the plane. Moreover, as we saw in our enumeration of the dangers, not only is the plane of consistency in danger of being betrayed or thrown offtrack through the influence of other causalities that intervene in an assemblage of this kind, but the plane itself engenders dangers of its own, by which it is dismantled at the same time as it is constructed. We are no longer, it itself is no longer *master of speeds*. Instead of making a body without organs sufficiently rich or full for the passage of intensities, drug addicts erect a vitrified or emptied body, or a cancerous one: the causal line, creative line, or line of flight immediately turns into a line of death and abolition. The abominable vitrification of the veins, or the purulence of the nose—the glassy body of the addict. Black holes and lines of death, Artaud's and Michaux's warnings converge (they are more technical, more consistent than the informational, psychoanalytic, or sociopsychological discourse of treatment and assistance centers). Artaud: You will not avoid hallucinations, erroneous perceptions, shameless phantasies, or bad feelings, like so many black holes on the plane of consistency, because your conscious will also go in that booby-trapped direction.⁷² Michaux: You will no longer be master of your speeds, you will get stuck in a mad race between the imperceptible and perception, a race all the more circular now that everything is relative.⁷³ You will be full of yourself, you will lose control, you will be on a plane of consistency, in a body without organs, but at a place where you will always botch them, empty them, undo what you do, motionless rags. These words are so much simpler than "erroneous perceptions" (Artaud) or "bad feelings" (Michaux), but say the most technical of things: that the immanent molecular and perceptive causality of desire fails in the drug-assemblage. Drug addicts continually fall back into what they wanted to escape: a segmentarity all the more rigid for being marginal, a territorialization all the more artificial for being based on chemical substances, hallucinatory forms, and phantasy subjectifications. Drug addicts may be considered as precursors or experimenters who tirelessly blaze new paths of life, but their cautiousness lacks the foundation for caution. So they either join the legion of false heroes who follow the conformist path of a little death and a long fatigue. Or, what is worse, all they will have done is make an attempt only nonusers or former users can resume and benefit from, secondarily rectifying the always aborted plane of drugs, discovering

through drugs what drugs lack for the construction of a plane of consistency. Is the mistake drug users make always to start over again from ground zero, either going on the drug again or quitting, when what they should do is make it a stopover, to start from the "middle," bifurcate from the middle? To succeed in getting drunk, but on pure water (Henry Miller). To succeed in getting high, but by abstention, "to take and abstain, especially abstain," I am a drinker of water (Michaux). To reach the point where "to get high or not to get high" is no longer the question, but rather whether drugs have sufficiently changed the general conditions of space and time perception so that nonusers can succeed in passing through the holes in the world and following the lines of flight at the very place where means other than drugs become necessary. Drugs do not guarantee immanence; rather, the immanence of drugs allows one to forgo them. Is it cowardice or exploitation to wait until others have taken the risks? No, it is joining an undertaking in the middle, while changing the means. It is necessary to choose the right molecule, the water, hydrogen, or helium molecule. This has nothing to do with models, all models are molar: it is necessary to determine the molecules and particles in relation to which "proximities" (indiscernibilities, becomings) are engendered and defined. The vital assemblage, the life-assemblage, is *theoretically or logically* possible with all kinds of molecules, silicon, for example. But it so happens that this assemblage is not *mechanically* possible with silicon: the abstract machine does not let it pass because it does not distribute zones of proximity that construct the plane of consistency.⁷⁴ We shall see that machinic reasons are entirely different from logical reasons or possibilities. One does not conform to a model, one straddles the right horse. Drug users have not chosen the right molecule or the right horse. Drugs are too unwieldy to grasp the imperceptible and becomings-imperceptible; drug users believed that drugs would grant them the plane, when in fact the plane must distill its own drugs, remaining master of speeds and proximities.

Memories of the Secret. The secret has a privileged, but quite variable, relation to perception and the imperceptible. The secret relates first of all to certain contents. The content is *too big* for its form . . . or else the contents themselves have a form, but that form is covered, doubled, or replaced by a simple container, envelope, or box whose role it is to suppress formal relations. These are contents it has been judged fitting to isolate or disguise for various reasons. Drawing up a list of these reasons (shame, treasure, divinity, etc.) has limited value as long as the secret is opposed to its discovery as in a binary machine having only two terms, the secret and disclosure, the secret and desecration. For on the one hand, the secret as content is superseded by a perception of the secret, which is no less secret

than the secret. It matters little what the goal is, and whether the aim of the perception is a denunciation, final divulging, or disclosure. From an anecdotal standpoint, the perception of the secret is the opposite of the secret, but from the standpoint of the concept, it is a part of it. What counts is that the perception of the secret must necessarily be secret itself: the spy, the voyeur, the blackmailer, the author of anonymous letters are no less secretive than what they are in a position to disclose, regardless of their ulterior motives. There is always a woman, a child, a bird to secretly perceive the secret. There is always a perception finer than yours, a perception of your imperceptible, of what is in your box. We can even envision a profession of secrecy for those who are in a position to perceive the secret. The protector of the secret is not necessarily in on it, but is also tied to a perception, since he or she must perceive and detect those who wish to discover the secret (counterespionage). There is thus a first direction, in which the secret moves toward an equally secretive perception, a perception that seeks to be imperceptible itself. A wide variety of very different figures may revolve around this first point. And then there is a second point, just as inseparable from the secret as its content: the way in which it imposes itself and spreads. Once again, whatever the finalities or results, the secret has a way of spreading that is in turn shrouded in secrecy. The secret as secretion. The secret must sneak, insert, or introduce itself into the arena of public forms; it must pressure them and prod known subjects into action (we are referring to influence of the "lobby" type, even if the lobby is not in itself a secret society).

In short, the secret, defined as a content that has hidden its form in favor of a simple container, is inseparable from two movements that can accidentally interrupt its course or betray it, but are nonetheless an essential part of it: something must ooze from the box, something will be perceived through the box or in the half-opened box. The secret was invented by society; it is a sociological or social notion. Every secret is a collective assemblage. The secret is not at all an immobilized or static notion. Only becomings are secrets; the secret has a becoming. The secret has its origin in the war machine; it is the war machine and its becomings-woman, becomings-child, becomings-animal that bring the secret.⁷⁵ A secret society always acts in society as a war machine. Sociologists who have studied secret societies have determined many of their laws: protection, equalization and hierarchy, silence, ritual, deindividuation, centralization, autonomy, compartmentalization, etc.⁷⁶ But perhaps they have not given enough weight to the principal laws governing the movement of content: (1) every secret society has a still more secret hindsociety, which either perceives the secret, protects it, or metes out the punishment for its disclosure (it is not at all begging the question to define the secret society by the
